

Cost Centre Services Energy Policy

At Cost Centre Services we aim to continually improve our energy performance through the implementation of an Energy Management System (The System).

As part of our energy and environmental strategy, we are committed to responsible energy management, through implementing energy management activities, and practicing energy efficiency throughout all our premises, plant, equipment and systems, wherever it is cost effective.

Cost Centre Services is committed to:

- Reducing our energy consumption by **5% over 2 years**
- Appointing an Energy Team Leader and Energy Team to ensure the successful implementation and continual operation of The System
- Sharing all the relevant information and providing necessary resources to achieve targeted energy performance. The number of staff employed in the Energy Team, their knowledge, skills and amount of investment will correspond with the demands of energy management activities
- Adhering to legal and other requirements regarding energy usage
- Supporting the purchase of energy efficient products, services, and design for energy performance improvement, if return on investment can be justified through reduction of energy consumption and carbon emissions
- Communicating the Energy Policy and other information regarding The System to all employees
- Promote the use of renewable energy wherever possible
- Regularly reviewing and updating our Energy Policy and Energy Management Activities
- Referring to this Energy Policy when setting and reviewing our energy objectives and targets
