

Case Study #4

Our investigations really pay off

This company engaged us in its second year of occupancy of a large factory and we delivered a supply related saving of £8,000 and a Half Hourly electricity contract saving of £9,000.

The supply related savings arose as a result of our Account Validation Report. After carrying out our usual checks we implemented a kVa reduction that produced a saving of in excess of £8,000pa.

This case study shows how critical intervention by CCS helped a business to significantly reduce its energy expenditure.
