

Case Study #7

Rollover - what it can mean

We delivered a staggering 67% saving for electricity supplies to Longhorsley Village Hall. Previously, electricity costs were £1,000pa but with a new contract via CCS the hall paid less than £320 in the subsequent year.

This was an instance of a client being 'rolled' successively by a supplier to a point where the tariffs are very much out of line with the prevailing market rates.

This case study shows the importance of regularly reviewing your energy usage and comparing the tariff with current market rates
